

PLACEHOLDER CONTENT. NOT YET IMPLEMENTED

tl;dr

This is a Typst template that can be used with Quarto to execute code and automatically render outputs like text, plots, and tables. Forget about copying and pasting screenshots

$$\frac{\partial^n f}{\partial x_i \dots \partial x_j}(a_1, a_2, \dots, a_n) = \frac{\partial^n f}{\partial x_j \dots \partial x_i}(a_1, a_2, \dots, a_n)$$

Check it out, you can also add Typst code to make math functions or diagrams.

ADDING SECTIONS

This format is a Typst canvas, but Quarto is where you write the sections that contain text, code, and outputs. These sections are what you are reading now. To create these sections in white blocks (or whatever color you want...), wrap your sections in fenced divs like this:

```
:::{.block fill="white" inset="30pt" radius="6pt"}
```

Headings, text, and code go here

```
:::
```

ADDING TABLES

Likewise, you can add tables by doing the same as above.

mfr	model	year
Ford	GT	2017
Ferrari	458 Speciale	2015
Ferrari	458 Spider	2015
Ferrari	458 Italia	2014
Ferrari	488 GTB	2016
Ferrari	California	2015

tinytable seems to look the best in this format fyi.

INSTALLATION

To install this poster template, go to your project root and run:

```
quarto install extension https://codeberg.org/edenian-prince/quarto-typst-poster/archive/main.zip
```

You can also add the template/demo quarto document by running the code below, but note, it adds all the files in the repo currently..

```
quarto use template https://codeberg.org/edenian-prince/quarto-typst-poster/archive/main.zip
```

USAGE

After installing, change the format in your Quarto document’s yaml front matter to `format: poster-typst`

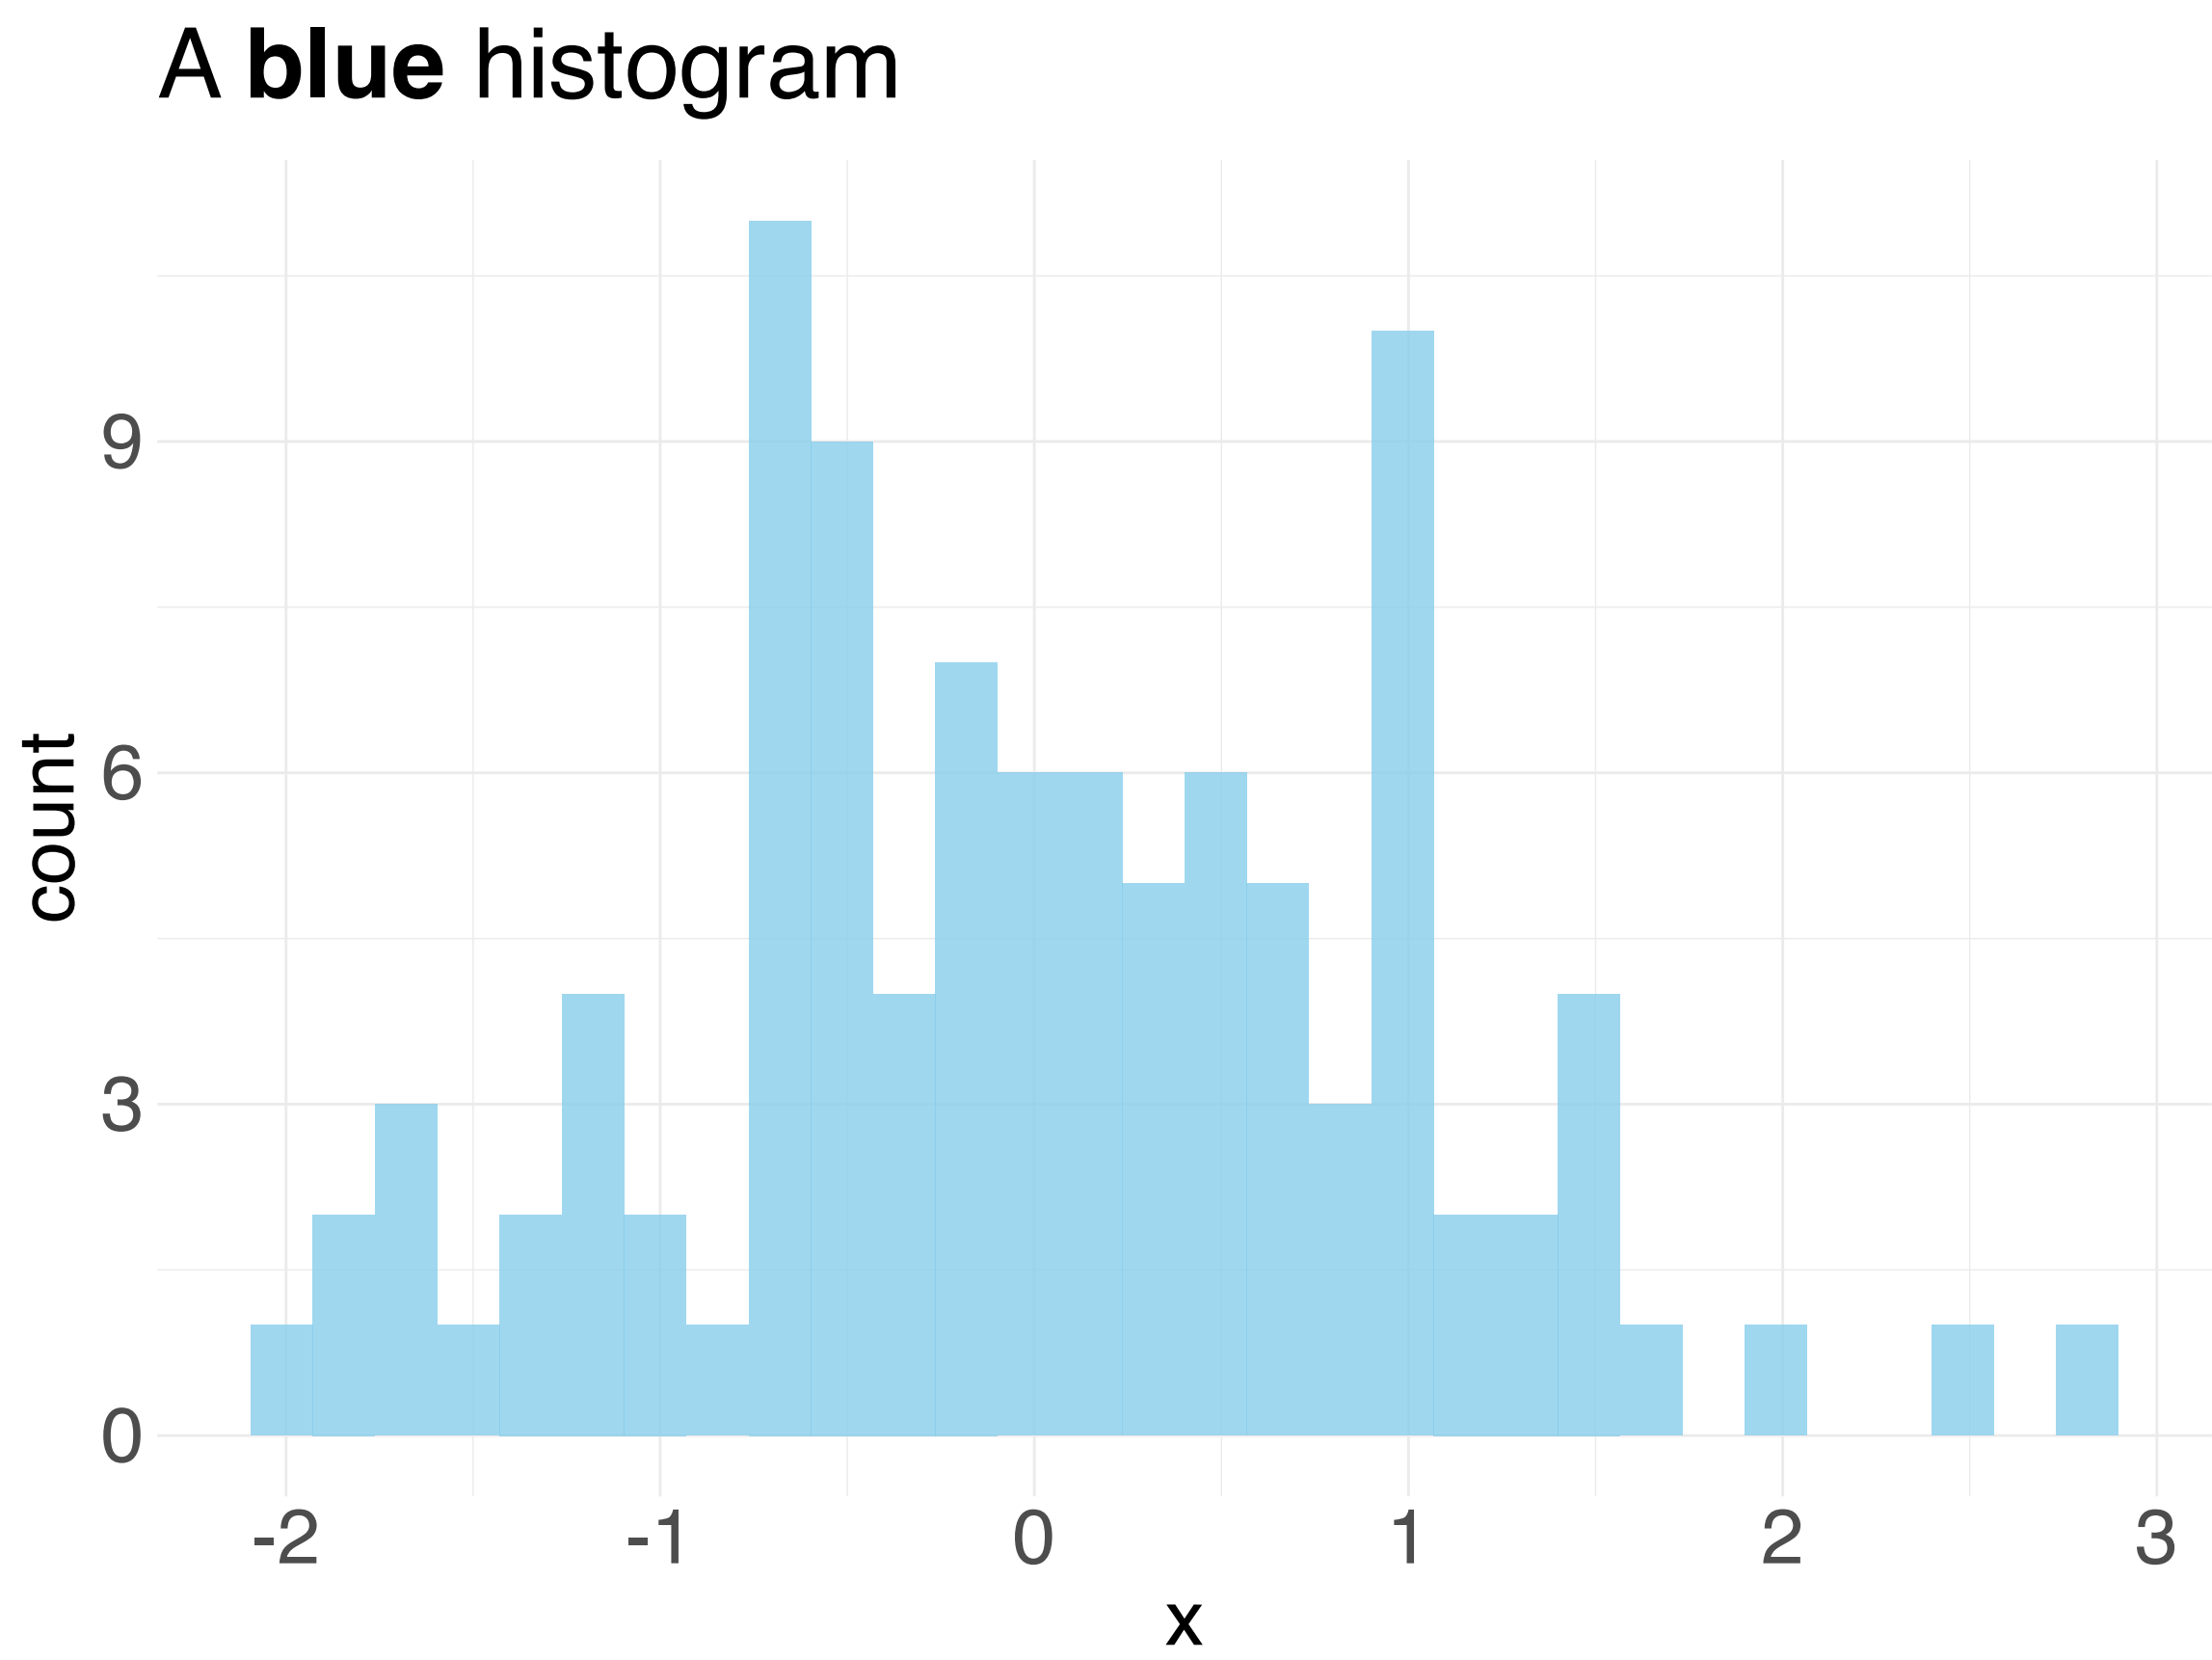

```
---
format:
  poster-typst: default
---
```

You can also add other options in the front matter like a title, subtitle, and color options. See the codeberg repo for a complete list of options.

ADDING PLOTS

Run put your code in the Quarto document like you normally would and it will render here.

- Center the plot with `#| fig-align: center`
- Adjust the width with `#| fig-width: 12`
- Adjust the height with `#| fig-height: 9`
- Adjust plot attributes in your code

Add a footer or something underneath

TYPST CODE

You can add Typst snippets in the Quarto doc like this with showybox. This is how I made the `tl;dr` and `Source Code` blocks.

```
```${=typst}
#import "@preview/showybox:2.0.4": showybox

#showybox(...)

```
```

RENDER THE POSTER

```
quarto render poster.qmd
```

Source Code
